Feeling a little down? If so, I've got *just* the thing for you:

"Our Favorite Things"

Magnetic stirrers and Josephson junctions,
Supercomputers which integrate functions,
Globular clusters and yes, superstrings -
These are a few of our favorite things!

Red shifts and blue shifts and Stark shifts and nightshifts,
Steaming hot coffee for those key late-night lifts,
Grade distributions with Gaussian wings -
These are a few of our favorite things!

When the grant's lost,
When the disks crash,
When the data's bad,
We simply remember our favorite things,
And then we don't feel so sad.

Alkali metals and rare noble gases,
Virtual photons which seem to have masses,
Aiming refractors at nebular rings -
These are a few of our favorite things!

Models tailed standard and systems chaotic,
Off giving talks in locations exotic,
Gluons which stick stronger than Velcro clings -
These are a few of our favorite things!

And let's not forget the physics/astronomy

Happy Hour!

Thursday at 4:30 p.m. in Sloane Physics Lounge
